

Dear Harold:

I just learned that ACS has approved my ~~research~~ <sup>Faculty Research</sup> Award application, which ~~he~~ will help a great deal to relieve me from ~~the~~ <sup>the heavy</sup> teaching responsibility. I wish to thank you for your letter and support.

Not much news from here, except Wynne started sequencing the activated  $erbB$  (Teddy's 7258 clone). The LTR is located about 500 to 700 nucleotides upstream from the 0.37 Kb exon (the 5'-most exon homologous to v- $erbB$ ), and points to the same direction as  $erbB$ . The last two ~~nucleotides missing~~ <sup>of LTR</sup> TTs are missing (everything ~~else~~ is identical to Ron's SRA-2 sequence) — fairly convincing for ~~a~~ upstream integration.

Congratulations for another prestigious award for Mike & you (Paul informed ~~me~~) ~~about this~~. we are all happy ~~of~~ <sup>about this</sup>. Some of us ~~are~~ including Don & Paul are betting that when the human oncogene story is more clear, you & Mike ~~a~~ will be going to Stockholm & dance with the Royal family!

Don told me that next year's Cold Spring Harbor Symp will be on Oncogenes. If you happen to know the Organizer, please tell me. I wish to write to him ~~or~~ her to have chance to present our work

Best Regards

Wing - Jim 11/11/82
